the 1990s, the number of people in the world who are undernourished has increased from 600 million to 800 million.

There are a number of reasons for this. First, the world population has increased from 5 billion in 1987 to 6 billion in 1999, and is projected to reach 8 billion by 2025. Second, the world population is ageing, and the number of people aged 65 and over is projected to increase from 200 million in 1990 to 400 million in 2025. Third, the world population is becoming more urban, and the number of people living in urban areas is projected to increase from 1 billion in 1990 to 2 billion in 2025.

Fourth, the world population is becoming more educated, and the number of people with a primary school education is projected to increase from 1 billion in 1990 to 2 billion in 2025. Fifth, the world population is becoming more mobile, and the number of people who are mobile is projected to increase from 1 billion in 1990 to 2 billion in 2025. Sixth, the world population is becoming more affluent, and the number of people who are affluent is projected to increase from 1 billion in 1990 to 2 billion in 2025.

Seventh, the world population is becoming more diverse, and the number of people who are diverse is projected to increase from 1 billion in 1990 to 2 billion in 2025. Eighth, the world population is becoming more heterogeneous, and the number of people who are heterogeneous is projected to increase from 1 billion in 1990 to 2 billion in 2025. Ninth, the world population is becoming more complex, and the number of people who are complex is projected to increase from 1 billion in 1990 to 2 billion in 2025.

Tenth, the world population is becoming more dynamic, and the number of people who are dynamic is projected to increase from 1 billion in 1990 to 2 billion in 2025. Eleventh, the world population is becoming more innovative, and the number of people who are innovative is projected to increase from 1 billion in 1990 to 2 billion in 2025. Twelfth, the world population is becoming more creative, and the number of people who are creative is projected to increase from 1 billion in 1990 to 2 billion in 2025.

Thirteenth, the world population is becoming more intelligent, and the number of people who are intelligent is projected to increase from 1 billion in 1990 to 2 billion in 2025. Fourteenth, the world population is becoming more knowledgeable, and the number of people who are knowledgeable is projected to increase from 1 billion in 1990 to 2 billion in 2025. Fifteenth, the world population is becoming more skilled, and the number of people who are skilled is projected to increase from 1 billion in 1990 to 2 billion in 2025.

Sixteenth, the world population is becoming more capable, and the number of people who are capable is projected to increase from 1 billion in 1990 to 2 billion in 2025. Seventeenth, the world population is becoming more competent, and the number of people who are competent is projected to increase from 1 billion in 1990 to 2 billion in 2025. Eighteenth, the world population is becoming more confident, and the number of people who are confident is projected to increase from 1 billion in 1990 to 2 billion in 2025.

Nineteenth, the world population is becoming more assertive, and the number of people who are assertive is projected to increase from 1 billion in 1990 to 2 billion in 2025. Twentieth, the world population is becoming more aggressive, and the number of people who are aggressive is projected to increase from 1 billion in 1990 to 2 billion in 2025. Twenty-first, the world population is becoming more competitive, and the number of people who are competitive is projected to increase from 1 billion in 1990 to 2 billion in 2025.
